Time graph showing activation based on document-specified times

availability time = media time

Availability time

4

4 is never active because it is available only after it has ended.

The begin of 3 truncates 2

1 becomes available during its activation period. It's resolved begin is its *available* time.

3

Note that the duration of each document's activation period can be limited by either the document's end time (specified by the `dur` attribute and/or the latest `end` attribute) *or* the arrival of the next document, whichever is earlier.

2

3 active

2 active

The left edge and right edges of each document represent the document's begin and end times

1
