Time graph showing activation based solely on document availability time

Availability time

availability time = media time

3

3 active

2

2 active

Note that the duration of each document's activation period depends on the arrival time of next document

1

1 active

D_{SUB}

The width of each document reflects the intended media time relation, *not* what is in the document (which has no `begin`, `end` or `dur` attributes)

Gap

Overlap

Media time
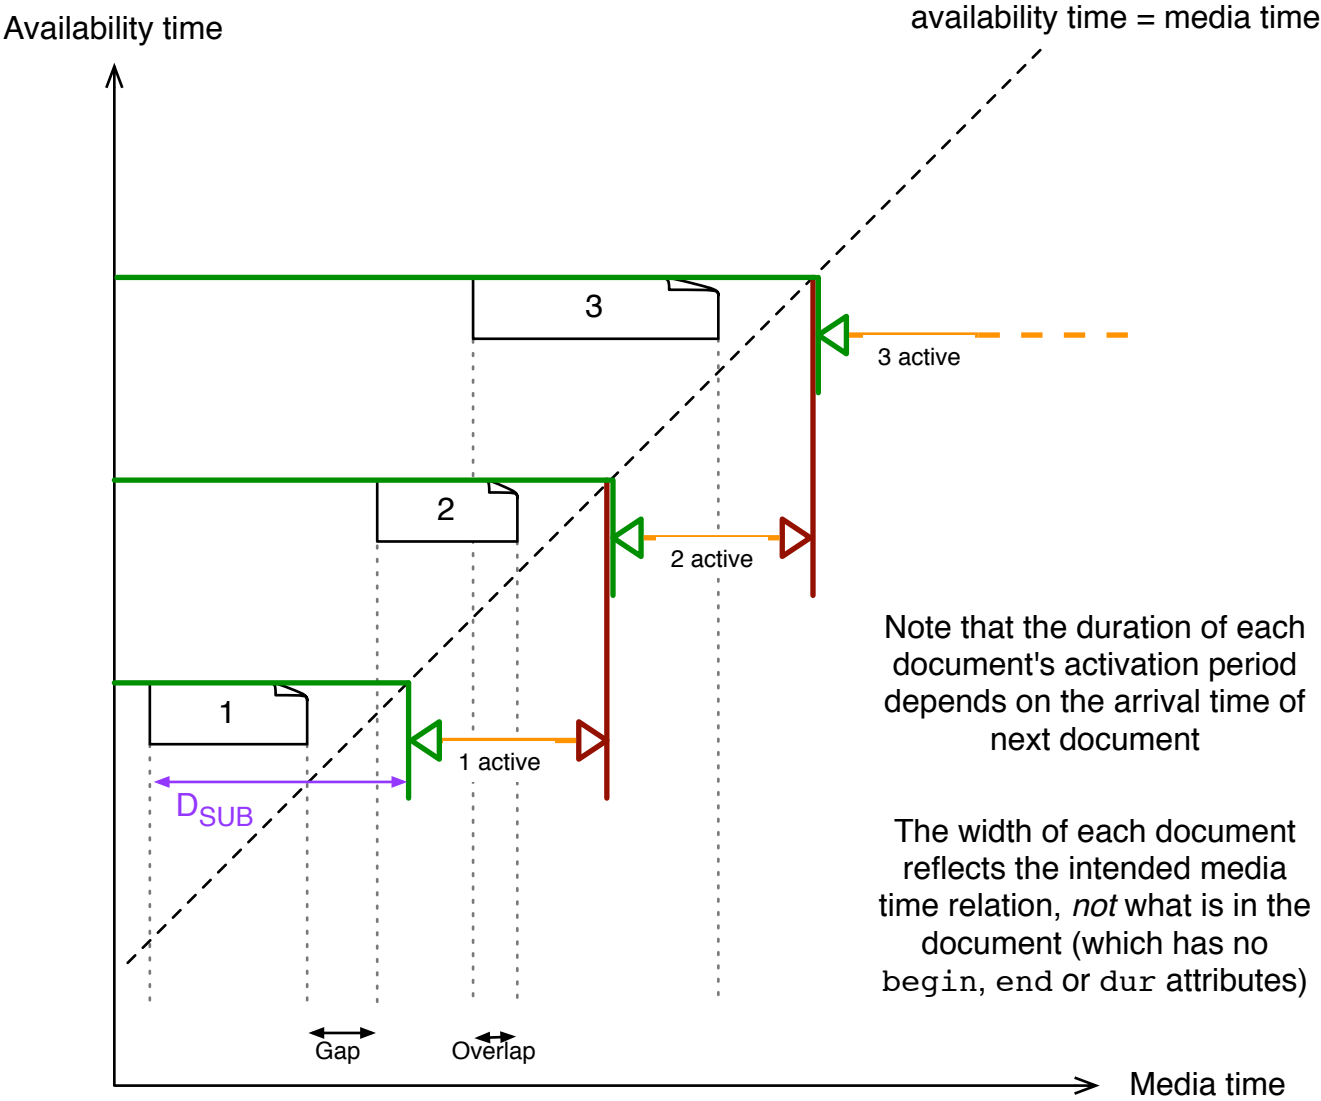

Document resolved begin time   Document resolved end time
